TECHNICAL SKILLS

AI Technologies

- LLM & AI Agents
- RAG & MCP

Programming & Backend

- Python (Basic)
- JavaScript (Basic)
- HTML / CSS (Basic)
- FastAPI (Basic)

AI Development Tools

- Claude
- ChatGPT
- Gemini

Development Tools

- Git / Docker

EDUCATION

Walailak University

Degree:
Intelligent Information Technology

GPAX: 3.33

PROFILE

Third-year Intelligent Information Technology student at Walailak University interested in AI development and LLM-powered applications. Experienced in designing AI system logic, developing Multi-Agent workflows, and integrating RAG and MCP for information retrieval. Interested in building intelligent applications and automation systems that solve real-world problems.

PROJECT EXPERIENCE

Generator AI-Powered AUN-QA Document Generation System

Developed an automated document generation system for AUN-QA quality assessment using Multi-Agent Architecture and LLMs with RAG to retrieve relevant information and supporting evidence for generating structured DOCX documents.

Responsibilities & Contributions

- Designed the system logic and developed the PS Criterion Agent, while implementing the Master Agent Workflow to coordinate AI Agents and retrieval processes.
- Developed DOCX Template Parsing to analyze document structures, including sections, headings, tables, and content slots, and convert them into structured JSON.
- Integrated MCP-based Retrieval to retrieve relevant information and evidence from ChromaDB, MongoDB, and Document/OCR sources through the Retrieval Manager.
- Implemented Verification, Retry, and Reference Mapping to validate Agent-generated results and maintain traceability to original data sources.
- Developed Template Injection to populate DOCX templates with verified content while preserving the original structure, supporting both DOCX generation and HTML Preview.
